

Bostondinio Coach

bostondiniocoach.com | Prepared for: Bostondinio Coach team

1. Website Overview

Bostondinio Coach is a Boston-area car service offering flat-rate airport transfers to Logan (BOS), Manchester (MHT) and T.F. Green (PVD), plus point-to-point rides, hourly charters, and wedding/event transportation across Greater Boston. The site is well built on the surface, clear service descriptions, an online booking widget, a fleet page, a short blog, and real customer reviews, but it is a new domain with no ranking history, so the SEO focus right now should be building a strong foundation and capturing easy local-search wins before competing head-on for the most competitive keywords.

2. On-Page SEO Findings

- **Titles & meta description:** The homepage title and meta description are well written and already include strong local keywords ("Boston car service", "Logan Airport") along with the phone number, a good starting point.
- **Legacy meta tag:** An outdated meta-keywords tag is still present. It does not hurt rankings, but it should be removed and that effort redirected into content.
- **Thin service content:** The homepage has good service headings (Airport Transfer, Black Car & City Rides, Hourly Hire, Wedding & Events) but each is only 1–2 sentences. There is no dedicated page per service, so none of them can fully rank for their own keyword.
- **Service-area pages:** 30+ towns/cities are listed in the service-area section, but only as a plain list, none has its own page. This is the single biggest missed opportunity on the site: a page for "Car Service to Quincy" or "Car Service to Newton" can rank locally far more easily than the homepage competing for every city at once.
- **Schema markup:** No structured data (Schema.org) was detected for Local Business, Service, or Review. Adding this can unlock star ratings, business hours, and pricing directly inside Google search results.
- **Image formats:** Fleet and hero images are served as .jpg/.png; only the blog images use the modern .avif format. Converting the rest improves load speed on mobile.

3. Technical SEO Findings

- **Foundations:** Site loads on HTTPS with a proper canonical tag and a mobile viewport tag, the basics are in place.
- **Multilingual setup:** The site runs an /en/, /fr/, /es/ language structure but hreflang tags could not be confirmed, these are important so Google shows the right language version to the right visitor.
- **Sitemap / indexing:** A sitemap.xml and robots.txt should be confirmed and submitted to Google Search Console; this could not be verified externally and is a quick, high-value check.
- **Ongoing monitoring:** As a brand-new domain, page speed, Core Web Vitals, and crawl budget should be monitored monthly rather than as a one-time fix.

4. Local SEO Findings

- **NAP consistency:** Business Name, Address (437 Turnpike St, Canton, MA 02021) and Phone are consistent across the site, a good base for local citations.

- **Google Business Profile:** The Google Business Profile could not be reviewed from the website alone; this is usually the single strongest local ranking factor for a car service business and should be optimized and posted to regularly.
- **Reviews:** Genuine reviews are shown on-site, but without Review schema they are not eligible to display as star ratings in Google search results.
- **Citations:** As a new business, the site will need consistent local directory citations (Yelp, Bing Places, Apple Maps, industry directories) to build trust signals faster.

5. Content & Off-Page Findings

- **Blog:** The blog has only 3 posts, the newest dated May 2025, good topics (Logan Airport vs. rideshare, Dedham service, Gillette Stadium game-day traffic) but not enough volume or frequency to build topical authority.
- **Backlinks / authority:** Being a new domain, the site currently has very little backlink authority. A steady, natural link-building pace is needed rather than a one-time push.

6. Priority Action Items

Priority	Issue	Impact
High	No Schema/Structured Data (Local Business, Service, Review)	Losing rich-result eligibility (star ratings, business info) in Google search
High	No dedicated pages for each service (Airport Transfer, Point-to-Point, Hourly, Wedding/Events)	All services compete for rankings on one thin homepage section instead of ranking individually
High	30+ cities listed with no individual location pages	Missing the biggest local-SEO opportunity — each city could rank on its own for "car service to [city]"
Medium	Only 3 blog posts, last dated mid-2025	Weak topical authority; not enough fresh content for Google to crawl regularly
Medium	Fleet & hero images in .jpg/.png instead of modern formats	Slower page load, which hurts Core Web Vitals and mobile rankings
Medium	Outdated meta-keywords tag still in use	Harmless but wasted effort — Google ignores it; better to invest that space in content
Low	No visible sitemap.xml / robots.txt confirmation	Could slow down discovery and indexing of new pages
Low	Google Business Profile optimization not verifiable from site alone	GBP is often the #1 local ranking factor and needs separate review/setup

7. Recommended Monthly SEO Packages

Since Bostondinio Coach is a new website with no ranking history yet, pricing below is scoped to be realistic and affordable at the start, with room to scale up as rankings and bookings grow. All packages include on-page fixes, technical health checks, and monthly reporting — the difference is in scope, speed, and how aggressively new content and links are added each month.

What's Included	Basic	Standard	Premium
Best for	New site — building the SEO foundation	New site ready to actively compete for rankings	New site aiming to dominate local search fast
Keyword tracking	8 – 10 keywords	18 – 22 keywords	35+ keywords
On-page SEO (titles, meta, headers)	Homepage + key pages	All pages + new service pages	All pages + service + city pages
Technical SEO (speed, schema, sitemap, indexing)	Core fixes (schema, sitemap, image formats)	Core fixes + monthly monitoring	Full technical audit + ongoing monitoring
New service landing pages	—	Up to 3 new pages/month	Up to 6 new pages/month
Local city/location pages	—	2 city pages/month	4 city pages/month
Google Business Profile management	Basic setup & optimization	Ongoing posts + review management	Full management + weekly posts
Blog content	1 article/month	2 articles/month	4 articles/month
Backlink building / citations	5 local citations/month	10 citations + 5 quality backlinks/month	15 citations + 12+ quality backlinks/month
Competitor analysis	—	Quarterly	Monthly
Reporting	Monthly report	Monthly report + call	Monthly report + strategy call

Monthly Investment	\$350 / month	\$650 / month	\$1,150 / month
--------------------	---------------	---------------	-----------------

Basic — Foundation

Best if the goal right now is simply to fix what's broken, get properly indexed, and start showing up for the most important local searches. Ideal starting point for a brand-new site with a limited budget.

Standard — Growth

Best once the foundation is solid and the goal is to actively out-rank competitors, adding new service and city pages every month, more consistent content, and steady link building. This is the recommended package for a new site that wants visible traction within 3–6 months.

Premium — Aggressive Growth

Best for capturing the local market quickly across all of Greater Boston, full location-page rollout, weekly Google Business Profile activity, and an aggressive content and link-building schedule.

Note: Prices above are a recommended starting range for a new website; they can be adjusted once initial keyword research and competitor analysis are finalized.

These prices are negotiable, happy to adjust scope, start with a lower package for the first 1–2 months while we fix the technical issues, or offer a discount on a 3–6 month commitment. Let me know what budget range works for you and I can tailor a package around it.
